

WATER SAMPLING DATA WORKFLOW

(including data from National Reference Stations, Larval Fish, Microbial Coastal Sampling and Southern Ocean Time Series)

Version 5.0

11th July 2024

Data Workflows

The AODN, in managing the data for IMOS, has developed workflows for each IMOS sub-facility to describe the flow of IMOS data from planning through data collection to data delivery and public data access.

The primary goals of this workflow are to:

- Improve data flow and data handoff, making tracking of data status easy and preventing data loss
- Identify and delimit precisely the responsibilities of each person involved
- Improve communication at the interface between IMOS facilities and the AODN
- Improve transparency for end users by providing more details to populate metadata records (*i.e.* limitations and processing methods applied to datasets)
- Assist in reporting planned deployments against actual deployments and data delivery

The workflow is available on the next page of this document. Additional information (*i.e.* timeline, input, output, step description) for each operation step is available in the 'Supporting Information' section. The role and contact details of people involved in the workflow are summarised in a table and suggested potential improvements are listed at the end of the document.

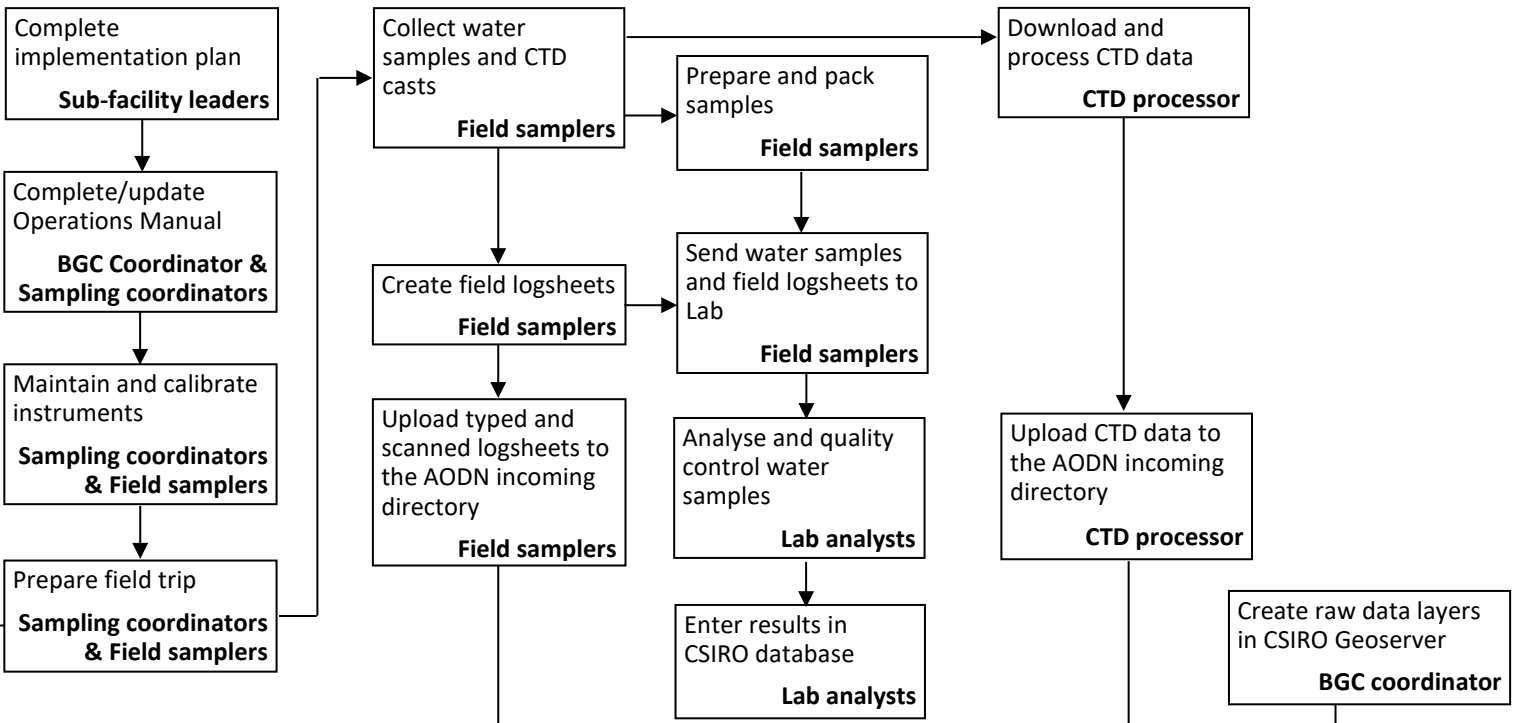

Planning

Sample collection

Analysis & processing

Data delivery on the AODN portal

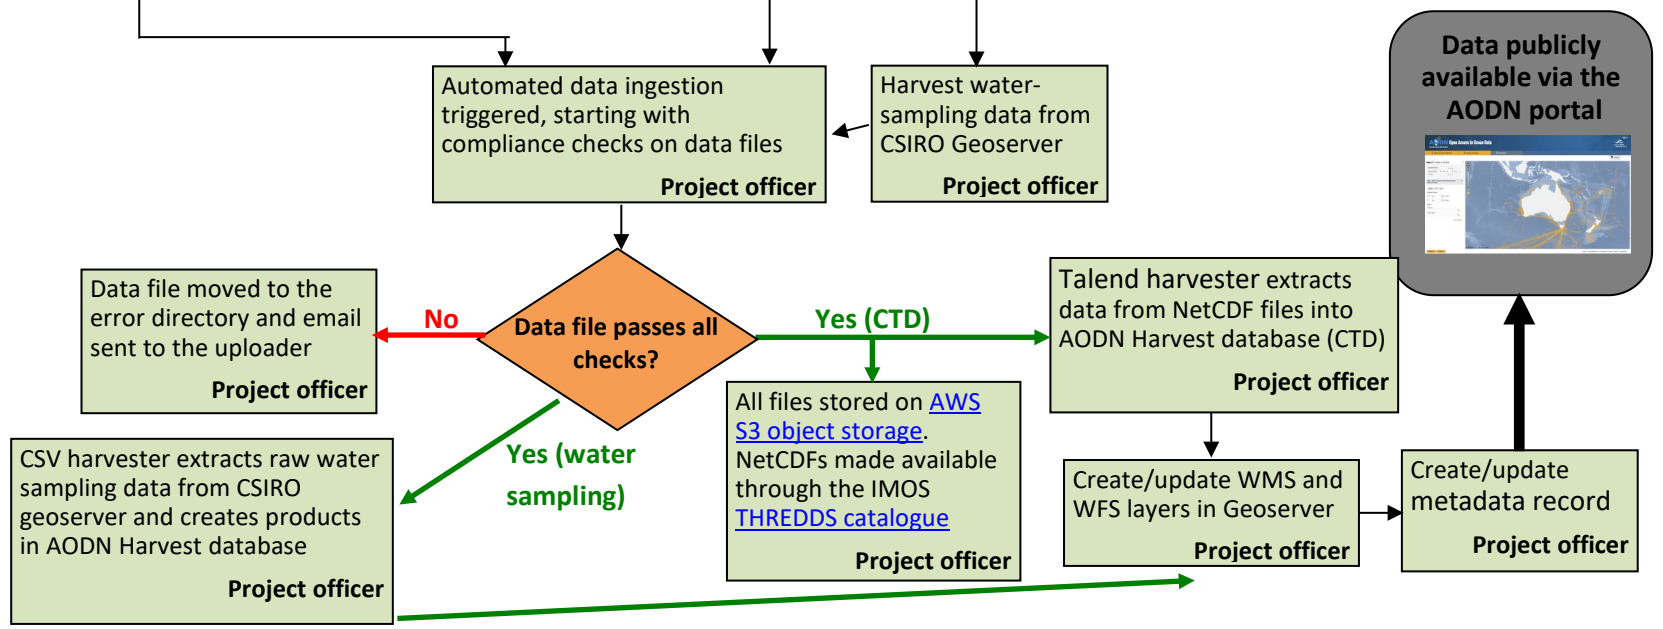

National Mooring Network - NRS BGC sampling

- List of acronyms:**
- AODN: Australian Ocean Data Network
 - AWS: Amazon Web Services
 - BGC: BioGeoChemical
 - NRS: National Reference Stations
 - SOTS: Southern Ocean Time Series
 - QA/QC: Quality Assurance/Quality Control
 - THREDDS: Thematic Real-time Environmental Distributed Data Services
 - WFS: Web Feature Service

Green boxes indicate processes and infrastructures monitored in Nagios

Supporting information

Phase	Operation step	Timeline	Input	Output	Step description	Step operator
Planning	Complete implementation plan		<ul style="list-style-type: none"> IMOS funding Node Science plans 	Implementation plan		Sub-facility leaders
	Complete/update Operations Manual		Implementation plan	Operations Manual completed/updated	Operations are described in the <i>NRS Biogeochemical Operations Manual</i> , which describes all practical aspects of the program, including safety, equipment maintenance, field sampling protocol, post-processing, CTD pre-run checks & data processing, analytical methods and data handling.	BGC Coordinator & Sampling coordinators
	Maintain and calibrate instruments		Operations Handbooks	Instruments operational	Send to CSIRO calibration lab when necessary.	ANMN Sampling coordinators & Field samplers
	Prepare field trip	Half a day	<ul style="list-style-type: none"> Operations Handbooks Operational instruments 	Field trip organised	<ul style="list-style-type: none"> 0.5 day for lab analysts to get gear ready and organise freighting. Liaison between field samplers and lab analysts as the latter supply equipment for each field trip. 	ANMN Sampling coordinators & Field samplers
Sample collection	Collect water samples and CTD casts	1 day	<ul style="list-style-type: none"> Operations Handbook Field trip organised 	<ul style="list-style-type: none"> Water samples CTD casts Field logsheet 	<p>Visit the NRS site, complete all sampling tasks as per Operations Handbooks and fill out field logsheet.</p> <p>Additional data: Larval Fish – Discontinued in June 2022. Selected NRS sampling trips. Went to SIMS for processing. Microbial Coastal Sampling – Nutrients and Flow Cytometry are collected and processed as per the NRS samples (CSIRO and SARDI). SOTS – Phytoplankton samples collected from the SOTS mooring after retrieval.</p>	ANMN Field samplers
	Prepare and pack samples		<ul style="list-style-type: none"> Operations Handbook Water samples 	Samples ready for shipping	Filtering, preserving and packing samples following procedures described in Operations Handbook	ANMN Field samplers

	Create field logsheets	1 hour	Field logsheet	Scanned and typed field logsheets	Scan the handwritten field logsheet and transfer all information into a typed version. Save both as PDF.	ANMN Field samplers
	Upload field logsheets to the AODN incoming directory		Scanned and typed field logsheets	Scanned and typed field logsheets in AODN incoming directory	Upload logsheets as early as possible so that AODN can keep track of when field trips have taken place at each station. Field sheet information is also uploaded into the CSIRO database to provide the metadata for the samples	ANMN Field samplers
Sample collection	Send water samples and field logsheets to Lab	Every three or four months	<ul style="list-style-type: none"> • Samples ready for shipping • Field logsheets (electronic form) 	Samples and logsheets at CSIRO Labs (Hobart, Floreat or Cleveland)	2 out of 3 zooplankton samples (count and biomass) apart from MAI and NSI and PHB phytoplankton samples are sent to CSIRO Dutton Park. All other samples are sent to CSIRO Hobart. Nutrients samples from WA are sent to CSIRO IOMCRA . Notify BGC coordinator and AODN Project officer when samples are shipped. Field logsheets are sent in electronic format.	ANMN Field samplers
Analysis & processing	Analyse and quality control water samples	Three days for analysis and processing	Samples and logsheets at CSIRO Labs (Hobart, Floreat or Cleveland)	Quality-controlled data		ANMN Lab analysts
	Enter analysis results into database at CSIRO		Quality-controlled data	New analysis results in database	Water sampling data are entered into a database at CSIRO. Record a “missing sample” entry if no sample is available for a given field trip.	ANMN Lab analysts
	Download and process CTD data		CTD casts	CTD profiles in text (.cnv) and NetCDF formats, preview plots	Process raw data as per <i>Standardised Profiling CTD Data Post-Processing Procedures</i> document to create .cnv files. Then use the latest stable version of the IMOS Matlab Toolbox to apply further quality control, create NetCDF files (FV00 & FV001) and preview plots (PNG format).	ANMN CTD processor
	Upload CTD data to the AODN incoming directory		Processed CTD data (.cnv, NetCDF and plots)	CTD files in AODN incoming directory	Upload all .cnv, NetCDF (FV00 & FV01) and preview plots (PNG)	ANMN CTD processor

	Create raw data layers in CSIRO Geoserver		New analysis results in database	Raw data layers in CSIRO Geoserver	Create/update Geoserver layers (and underlying database views) so that AODN can periodically harvest all the raw water-sampling (WS) data without direct access to the CSIRO database.	BGC coordinator
	Harvest water-sampling data from CSIRO Geoserver		Raw data layers in CSIRO Geoserver	Raw water sampling (WS) data in AODN incoming directory	A weekly scheduled process, downloads raw data from CSIRO Geoserver, into CSV files, and pushes them into the AODN ingestion pipeline.	AODN Project officer
	Automated data ingestion triggered, starting with compliance checks on data files	Automatic (when files uploaded)	CTD files, raw WS data and logsheets available in the AODN incoming directory	Valid files ready to be published, non-compliant files moved to error directory	<p>Handling of incoming files is automatically triggered when a file arrives in the AODN incoming directory. Checks are applied to verify that each file</p> <ul style="list-style-type: none"> • is a correct data product for that upload location; • is compliant with the CF and IMOS conventions (NetCDF files); or • Is valid raw WS data file according to schemas agreed with CSIRO <p>Any file that fails any of these checks is moved to an error directory and the provider is notified by email. The steps below are only performed for files that pass all checks.</p>	AODN Project officer
	All files stored on AWS S3 object storage. NetCDFs made available through the IMOS THREDDS catalogue	Automatic (when files uploaded)	Valid files	Files stored on S3, NetCDF files accessible via IMOS THREDDS catalogue.	All logsheets (scanned & typed) and CTD files (.cnv, FV00 & FV01 NetCDF) are stored and accessible via S3. NetCDF files are also accessible via THREDDS.	AODN Project officer

Analysis & processing	Talend harvester extracts data and creates/populates AODN Harvest database (CTD)		Valid NetCDF files	Metadata and data in database tables for access via WMS/WFS	Harvester extracts the metadata required to make the files accessible via the AODN Portal and stores them in the database. For some file types the data (measurements) are also extracted.	AODN Project officer
	CSV harvester extracts raw water sampling data from CSIRO Geoserver and creates products in AODN Harvest database		Valid raw WS data in CSV files	Raw WS data and data products in AODN database	Harvester loads all raw data into AODN Harvest database and creates database views for the derived products to be served via AODN Geoserver	AODN Project officer

Data delivery on the AODN portal	Create/update WMS and WFS layers in Geoserver	1 week (when necessary)	Populated AODN Harvest database tables	WMS and WFS layers created in Geoserver	<ul style="list-style-type: none"> Database tables and/or views are used to create a WMS and WFS layer in Geoserver. Configure the pop-up window (content.ftl) and filters. Create style for WMS visualisation. 	AODN Project officer
	Create/update metadata record		Populated AODN Harvest database tables	Geonetwork record created and configured to support data discovery, visualisation and download via the AODN portal	<ul style="list-style-type: none"> Create a metadata record with a new UUID. Configure the newly created record (e.g. abstract, point of contact, parameters, timeframe). Fill out the distribution section with links to the corresponding Geoserver WMS and WFS layers and other AODN's download services. Talend harvester automatically updates bounding box. 	AODN Project officer
